JSPM-Libraries

Project Description

JSPM-Libraries is a Library Management System developed using Spring Boot. It provides an efficient and user-friendly way to manage library members, categories, books, and book issuances.

Features

- **Manage Members:** Easily add, update, and delete member information.
- **Manage Categories:** Organize books into categories for better management.
- **Manage Books:** Add, update, and keep track of books in the library.
- **Issue Books:** Simplify the process of issuing and returning books.

Setup

Database Setup

JSPM-Libraries requires a MySQL database. It is recommended to use MySQL version 8.0 or later.

Login

Use the following credentials to log in:

- **Username:** admin
- **Password:** admin
